

MOTODIAG  
LIVE

WHAT WE HAVE OF NEW?

**CHIPTRONIC**

### 1 – Smart cables

The new Motodiag Live smart cables perform compatibility testing that brings a greater security in their use in an intuitive way, reducing possible errors and certifying that the cable selected is the correct one for the service chosen.

### 2 – Generation of shareable system reports

Personalized reports with the logo and the workshops data showing the real condition of the motorcycle when entering the workshop and the difference in the parameters obtained after carrying out the necessary adjustments, bringing much more transparency and confidence in the service provided. Instead of print-diag, which had some limitations, Motodiag Live reports can be extracted from any model or system that is included in the Motodiag live application table. These reports can be saved to PDF, making easier to share via email, WhatsApp, as well as other applications.

### 3 – Connections

Once time connected to the internet, the user will have the access to updates that will be available to purchase as they are released, as well as the possibility of staying on top of all the news about the equipment. Motodiag Live has a Bluetooth connection that allows be connected with smartphones and tablets that use the Android system. It is also possible to use the function of mirroring the Smartphone or tablet screen directly on a Smart TV or computer, expanding the field of view to the details provided by the equipment.

### 4 – Extract Management

Through a detailed extract statement, separated by registered user, it is possible to check which services were performed during a certain period of time. Each serial can have up to 5 simultaneous users.

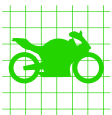

### 5 – Instruction manual

The Motodiag Live equipment makes available on your own interface has the complete instruction manual, with all the information the user needs to make a good use of the equipment. In this instruction manual you can check all the cables and accessories available for the Motodiag Live equipment, as well as information about service channels, warranty term, application table, configurations, releases, credits, extracts, reports and much more.

## 6 – Collaborative mode

Through the collaborative mode, it is possible to users of the Motodiag Live equipment become our main development partners, interacting and evaluating the available services. For example, when a specific motorcycle is not in our application table, but the user detects that the service can be performed, he can send us a photo of the motorcycle and chassis for Chiptronic's internal validation. With the information validated by our engineering team, the user will earn points that can be used in an exclusive gamification program that will offer several technical's and importants advantages to the user.

## 7 – Graphical view's

The graphics that is generated by the Motodiag Live equipment, it is possible to the user monitorate the parameters of sensors and actuators in real time, allowing for various measurements and comparisons.

## 8 – Multest

The Multest accessory version incorporated on the Motodiag live has the possibility of cacth a graphical view of the fuel pressure and the voltage measured on the auxiliary pin. It is also possible to generate a measurement report with the accessory showing the last 10 seconds of the reading. furthermore it is able to change the pressure units : KPA, PSI and BAR.

## 9 – Electrical diagrams

The new Motodiag Live let's able to the user has the option to make electrical schematic purchases directly by the app, through a prepaid credit. Most of the schemes available are for motorcycles and automakers considered “premium”, such as BMW, TRIUMPH and DUCATI.

## 10 – Intuitive interface

Through the intuitive interface present in the motodiag live equipment, Is able to the user observe the step by step for carrying out the diagnosis on the motorcycle choosed, which makes the service much more agile and easier. It is also possible to observe where the diagnostic connectors (DLC) is localized, furthermore performing tests of actuations in an uncomplicated way with the help of a step by step of the available function. Settings and resets also have an intuitive explanation, eliminating the need to use other tools such as the table and additional manuals.
